

Orifice for installation between flanges, type B

1090

Application

- To use in drinking water systems (other media after consultation)
- Static choke element for setting up a constant flow rate.
- Used as a back pressure orifice as a cavitation protection after the valves.
- Not to be used as shut-off fittings

Installation and assembly

- Installation between the flanges and on both sides of the seal.

Mode of operation

- The orifice plate is installed between the flanges. The settings are adjusted according to the manufacturer's specifications. The advantage of this orifice plate is that it can be adjusted when it has already been installed.

Caution

- For adjust the orifice only use the adjusting tool (No. 1199000101).

Product information

- To calculate the dimensions of the orifice plate please refer to the following information: required flow rate, necessary pressure differential or both specifications.

Vantages

- Adjustability in installed state.
- maintenance-free, corrosion-resistant version
